Special Air Quality Statement

Kings & Annapolis Counties, Wildfires

Halifax, Nova Scotia, 06.10.2025, 11:35 Time

USPA NEWS - 2025-10-06 (8:02am) Special Air Quality Statement

Kings & Annapolis Counties.

Short-range wind forecast: moderate southwesterly winds transitioning to strong southwesterly gusts of 40 km/h near noon today.

People more likely to be impacted by wildfire smoke include those aged 65 and older, pregnant people, infants and young children, people with an existing illness or chronic health condition, and people who work outdoors, should avoid strenuous activities outdoors and seek medical attention if experiencing symptoms.

Wildfires can produce smoke that degrades air quality in surrounding areas and downwind regions. Local smoke conditions may change as wind patterns and fire behavior fluctuate.

As smoke levels rise, health risks escalate. Limit outdoor time. Consider postponing or adjusting outdoor sports, activities and events.

Common and mild symptoms may include eye, nose and throat irritation, headaches or a mild cough. More severe but less common symptoms include wheezing, chest pains or severe cough. If you think you are experiencing a medical emergency, seek immediate medical help.

In situations where outdoor time is necessary, a well-fitting, well-constructed respirator mask (such as a NIOSH-certified N95 or equivalent) can lower exposure to fine smoke particles. However, reduced exposure does not eliminate health risks.

Indoor protection measures include keeping windows and doors closed. During concurrent extreme heat and poor air quality events, prioritize cooling. To safeguard indoor air quality against wildfire smoke, consider utilizing a clean, high-grade air filter in your ventilation system and/or a certified portable air cleaner equipped to filter fine particles.

Check in on others who are in your care or live nearby who may be more likely to be impacted by outdoor air pollution.

Always follow guidance from local authorities.
